- Responsible for technical definition and implementation coordination of access projects in Sub Saharan Africa, as well as identifying promising technological solutions for the markets. Duties include: managing the outside plant implementation of the fiber network and overseeing the implementation of network integration undertaken by equipment suppliers and contractors; coordinating and managing the communication between the cross functional teams, equipment suppliers and fiber contractors on any implementation related matters; supporting cross functional teams with fiber civil works related support and operations; supporting cross functional teams on management of all matters related to claims by third parties that have resulted from the implementation works; working as a liaison between cross functional teams, fiber contractors, local authorities and all statutory and regulatory parties.

Min Qualifications:

- Higher National Diploma or Bachelor's degree in Civil Engineering, Telecommunications Engineering or related qualification (in lieu of degree, 4 years relevant work experience).
- At least four years experience in managing fiber optic related civil works for outside plant
- Clean driving license with at least two years of driving experience
- English and French language skills

Pref Qualifications:

- Current knowledge and four years hands on experience of managing fiber optic based network projects.
- Current knowledge of telecommunications technologies including SDH, DWDM and IP, 2G / 3G backhaul networks.
- Experience in handling complex technical and operational challenges.
- Distinctive analytical skills, project coordination skills and ability to communicate with highly technical management team.
- In depth understanding of local population dynamics and relationships and how to manage those relationships to best serve the projects needs.
- A creative, self-starter who possess excellent technical and project acumen and who has a strong sense of focus, organization, attention to detail and proven ability to guide others to deliver outstanding results in a timely manner.

Responsibilities:

- Manage the outside plant implementation of the fiber network and oversee the implementation of network integration undertaken by equipment suppliers and contractors.
- Coordinate and manage the communication between the cross functional teams, equipment suppliers and fiber contractors on any implementation related matters.
- Support cross functional teams with fiber civil works related support and operations.
- Support cross functional teams on management of all matters related to claims by third parties that have resulted from the implementation works.
- Work as a liaison between cross functional teams, fiber contractors, local authorities and all statutory and regulatory parties.
